

# HYPERLAYER<sup>®</sup>

## HYBRID CRYSTAL COATING

### SUPERHYDROPHOBIC

Hybrid Crystal Coating is a professional grade coating range that lasts for upto 2 years, offering superior protection from chemical etching caused by environmental impacts. The Crystal imparts an outstanding gloss, protecting your paint from everyday contamination through its tough chemical resistance-and-release properties.

### FORMULATED IN JAPAN

A revolutionary cutting edge Carbon Nano-technology based crystal coating that forms a crystal clear, hard layer on vehicle's paint. Also effective on chrome, glass and metal surfaces. This helps to repel water and dirt, providing an easy-to-clean and hard surface coating which can only be altered with mechanical abrasion.

UV & Sun Rays

## CRYSTAL GRAPHENE COATING

Durability - 24 months (handwash only)  
Flashing time - 2-3 mins  
Drying time between Layers - 1 hr  
Drying time until water contact - 24-48 hrs  
Hardness Improvement (depends on the clear coat) - Upto 2 hrs  
Waterspot Vulnerability - Medium  
Coating can wear out with polishing and if not taken care for.  
Gloss - High | Smoothness - High  
Water Contact Angle - 110° - 125°

## CRYSTAL CERAMIC COATING

Durability - 18 months (handwash only)  
Flashing time - 2-3 mins  
Drying time between layers - 1 hr  
Drying time until water contact - 24-48 hrs  
Hardness Improvement (depends on the clear coat) - Upto 2 hrs  
Waterspot Vulnerability - Medium  
Coating can wear out with polishing and if not taken care for.  
Gloss - High | Smoothness - Medium  
Water Contact Angle - 90° - 110°
